Putting off your warranty rate application? Not looking forward to the long hours of sifting through work orders? Not sure you're getting the best possible rate?

DMSPro can help. Our service will eliminate the effort of gathering information needed to apply for a new warranty rate. In accordance with current factory policies, we utilize the "Actual Rate" option and examine data from all repair orders within the last 30, 60 or 120 days. We process the data and provide you with the best sequence of consecutive repair orders containing customer-pay repair orders with the highest calculated actual labour rate.

Without our Warranty Rate Review service, repair order data must be manually collected and analyzed. This can be very time consuming and can result in errors.

DMSPro's WRR service *eliminates the effort*. We extract the required data from your DMS for processing and we send you a report with the results.

We don't interrupt your day

You're in control. You run the program provided by DMSPro. It only takes 15 minutes to access the data and collect the information we need to analyze and prepare your reports. We can provide results within 24 hours.

Don't put off your application.

1. *Call DMSPro*
2. *We'll collect the data*
3. *You get the results*

Skill group & operation selection

Factory policy allows for the exclusion of certain operations from the rate review calculation. Our service is flexible enough to enable you to determine which operations should be excluded from your calculation.
